

CG90

VERSATILE POCKET GAUGE

The TrigJig CG90 Combi Gauge is a hugely versatile and handy multi-tool that focuses on speed and precision for tradespeople. Whether for trim projects, architrave, doors, cabinetry, moldings, setting blade height and so much more.

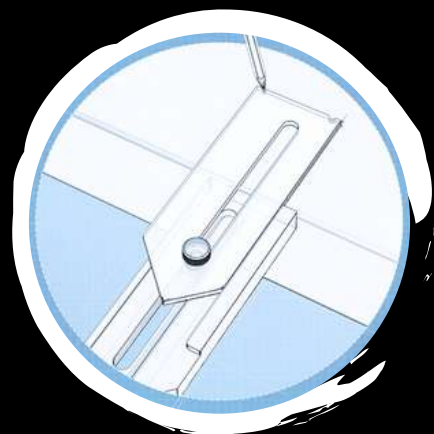

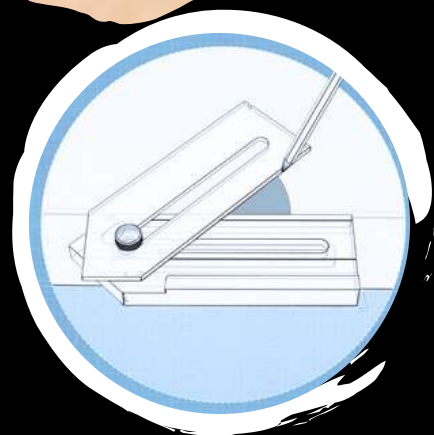

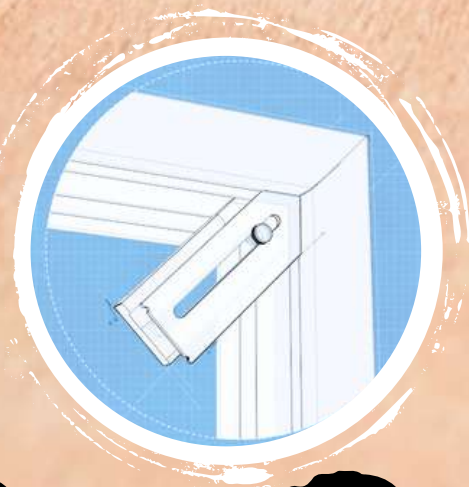

FEATURE PACKED

Including a depth gauge that can be used to scribe along an edge and transfer measurements quickly and precisely. A height gauge that can be used for setting table saw and router blade heights. Plus a handy corner gauge to mark door trim and architrave intersects.

ROBUST DESIGN

Fully CNC machined from high-grade aluminium and coated with a 15um thick colour anodised finish. The CG90 is a hard-wearing and super accurate tool to use in the shop or toolbelt. We've added three low-profile chamfers too to reduce parallax errors. A triple scale is laser etched inside an anti-wear recess to allow accurate measuring and marking/scribing.

Taking and transferring measurements precisely can be tricky with a standard ruler or tape measure; especially in tight spots. The CG90 makes light work of ensuring every measurement and mark is accurate.

- FIND + MARK REVEALS
- TRANSFER MEASUREMENTS
- SCRIBE PARALLEL LINES
- MARK COMMON ANGLES
- FIND + TRANSFER DEPTHS
